**NTS-4000 OCXO** delivers time directly to network using NTP, PTP/IEEE1588 protocols. The default configuration is equipped with 2x LAN (LAN1, LAN2) 100/10Mbps speed. The LAN2 can be upgraded to 10GbE\* SFP software timestamping interface.

The hardware timestamping option\* is available on LAN3 (RJ45) and LAN4 (SFP). It is requiring additional EXPANDER\* network card supporting 1GbE Ethernet. In case of using 1GbE HW-stamping, the LAN2 1x10GbE upgrade is not allowed. The maximum configuration of NTS-4000 supports 4x LAN: 2x 100/10Mbps & 2x 1GbE.

The NTS-4000 server takes ref. time from 2x independent redundant GNSS receivers. Built-in OCXO high performance oscillator ensures UTC when missing GNSS signals. Server can be synchronized to external clocks using 1PPS, IRIG-B, RS232 (ToD) inputs. It also provides ref. time output using 1PPS, IRIG-B, RS232, 10MHz, RS232(ToD).

## Redundant Synchronization Inputs

- 2x RJ45-ANT1/ANT2 for connecting max. smart NTS-antenna:  
Supported GNSS systems: GPS, GLONASS, GALILEO, BEIDOU  
Supported RF receivers: single band L1/E1, optionally dual band L1+L2 or L1 +L5  
Supported UTC accuracy: <5ns\* or <15ns or <25ns depends on receiver option  
Note1: Please refer to NTS-antenna specification (1pcs of included to std. product)  
Note2: The „accuracy” to UTC means PPS stability, the max. time error to UTC\*\*.
